TECHNICAL NOTICE VLP 06_04
 OXYGEN BARRIER (PET based)

REQUESTED BY: **COLORMATRIX**

- *Date of request:* December 7th, 2007

DESCRIPTION OF BARRIER SYSTEM

- *Trademark:* Amosorb

- *Description :* polyester based active oxygen scavenger (blend)

- *Application:* PET bottles

MARKET:

- Food application

TECHNICAL OPINION

The behaviour of this barrier solution was analysed on the PET stream.

The Amosorb solution's behaviour during recycling was studied in reclaiming and recycling tests on a pilot line representing the lines used by PET recyclers in Europe. Details of the tests conducted in the various studies are given in sheet FT 36.

In the colourless transparent bottle and sheet recycling stage, the presence of Amosorb in RPET flakes or granules leads to yellowing of end products depending on Amosorb concentration.

In the fibre recycling stage studied (continuous fibres, diameter corresponding to 5 decitex¹), the presence of Amosorb in RPET flakes or granules caused no major disruption in the process or the quality of the fibres obtained.

Given the consequences on recycling and in the current state of equipment and techniques used and available in Europe:

- **For dark coloured bottles: COTREP is favourable to the use of this barrier solution.** This stream of bottles is indeed mainly recycled into fibres.
- **For light coloured and transparent bottles, COTREP advises against using this type of solution** and recommends studying substitute systems that would limit the yellowing effect.
